

ProductFitter

Industry

Services, eCommerce, Consumer & B2B ordering.

The Customer

A building supplies and services company.

The Challenge

The challenge included ensuring the application was simple to use and worked well on tablet and desk-top devices.

Tool's Advantages

Validation of location before the order.

Helps wholesalers to take into account all the location and ship-to information to save costs and reduce shipment time.

Smooth Ordering

Internet connected devices create & send the order to the warehouse and other business systems close to instantly

Removing paperwork

Item details appear instantly in business systems when an order item is created, eliminating the need for paperwork.

Inventory management

Visibility and automated control of your inventory and stock levels multiplied by the ability to generate orders based on current inventory in stock.

An automated order management system

Including both public customer facing and internal staff only modules.

Solution Overview

The purpose of the project:

The system enables our client to automate the creation and management of new orders. These orders included complex requirements involving varying types of services and volumes/dimensions/types of materials.

Business Benefits

- Productivity improvements through business automation;
- Increase customer engagement through online ordering tool.

Scope of Service

- Requirements collection;
- Business Analysis;
- Architecture development;
- User Interface design & Development;
- Application Development;
- Product Support;
- Product Documentation;
- QA & Testing.
